- ☐ Join IEEE
- ☐ Establish IEEE Web Account
- ☐ Access the IEEE Member Digital Library

1) Enter a single keyword, phrase, or Boolean expression.  
Example: acoustic imaging (means the phrase acoustic imaging plus any stem variations)

2) Limit your search by using search operators and field codes, if desired.

Example: optical (fiber fibre) ti

3) Limit the results by selecting Search Options.

4) Click Search. See [Search Examples](#)

(CAD or "computer aided" or "computer assisted") and link\* and tree\*

Note: This function returns plural and suffixed forms of the keyword(s).

Search operators: [More](#)

Field codes: au (author), ti (title), ab (abstract), jn (publication name), de (index term) [More](#)

## Search Options:

## Select publication types:

- 2 [A hierarchical boundary model for solid object representation](#) 82%  
 Leila De Floriani , Bianca Falcidieno  
**ACM Transactions on Graphics (TOG) January 1988**  
 Volume 7 Issue 1  
 A new hierarchical model for solid object representation is described. This model, called a hierarchical face adjacency hypergraph (HFAH), is based on a relational description of the object boundary, called a face adjacency hypergraph (FAH), which considers faces as the primary topological entities defining the object boundary. The HFAH consists of a hierarchy of FAHs describing the decomposition of the boundary of an object into form features. In this paper ...
- 3 [A graph based approach to object feature recognition](#) 80%  
 L. De Floriani  
**Proceedings of the third annual symposium on Computational geometry October 1987**  
 Shape features, such as protrusions or depressions on faces, and through-holes or handles, are extracted from a boundary model of a solid object, called a Generalized Edge-Face Graph (GEFG). This graph provides a face-based topological description of the object boundary. The feature identification and classification are based on the analysis of the connectivity properties of the edge-face graph associated with the GEF and on some geometric considerations. The result is a hierarchical graph ...

Sashikumar Venkataraman , Milind Sohoni , Vinay Kulkarni  
Proceedings of the sixth ACM symposium on Solid modeling and applications May 2001

This paper discusses a feature recognition system for recognizing User Defined Features (UDF). The feature recognizer uses a graph-based approach to represent and recognize features. An attributed face adjacency graph consisting of topological and geometric attributes is used to represent UDF's. The feature recognition step involves finding similar subgraphs in the part graph. The novelty of the framework lies in the usage of a rich set of attributes to recognize a wide range of features effi ...

4 [Machine interpretation of CAD data for manufacturing applications](#) 80%

Qiang Ji , Michael M. Marefat  
ACM Computing Surveys (CSUR) September 1997  
Volume 29 Issue 3

Machine interpretation of the shape of a component for CAD databases is an important problem in CAD/CAM, computer vision, and intelligent manufacturing. It can be used in CAD/CAM for evaluation of designs, in computer vision for machine recognition and machine inspection of objects, and in intelligent manufacturing for automating and integrating the link between design

and manufacturing. This topic has been an active area of research since the late '70s, and a significant number of computat ...

- 6 The implementation of an algorithm to find the convex hull of a set of three-dimensional points 77%  
[A] A. M. Day  
**ACM Transactions on Graphics (TOG)** January 1990  
Volume 9 Issue 1  
A detailed description of the implementation of a three-dimensional convex hull algorithm is given. The problems experienced in the production and testing of a correct and robust implementation of a geometric algorithm are discussed. Attention is paid to those issues that are often brushed over in the theoretical descriptions but cause errors in a real computation. These include degeneracies such as coplanar points, floating-point errors, and other special, but not necessarily degenerate, c ...
